

DESIGNED TO PROTECT

Designed to Protect.

info@mthelmets.com | +34 968 166 991

Calle Budapest, 19-29. pol. ind. Cabezo Beaza, 30353 Cartagena - Spain.

Welcome to the universe of MT Helmets.

Designed to protect

After more than 50 years of experience, MT Helmets protects with its helmets in more than 100 countries in Europe, America, Asia, Africa and Oceania, being one of the European leading brands, based in Spain.

We are committed to quality

We are always committed to constant improvement in technology, protection and finishes. We guarantee that our helmets exceed all the certificates and homologations of the market.

At MT Helmets
we apply the best
technology to offer
the most competitive
helmet on the market.

Materials

Carbon Fibre

High-performance material used in competitions such as MotoGP or SBK, which provides optimum stiffness while being extremely light weight.

Fiber Reinforced Composite (FRC)

FRC is composed of a precise layering of fibres together with a high quality resin blend, which enables exceptional strength and lightness.

Tricomposite

Tricomposite is a formula based on the interweaving of 3 different types of fibres, each of which provides improved flexibility, lightness and impact resistance.

High Impact Resistant Polymer (HIRP)

HIRP is an improved formulation of polymers injected in very precise blocks, improving impact resistance at a lower weight.

Visors

— Optical polycarbonate anti-scratch visor

The flexibility and strength of polycarbonate ensures optimum safety and the optical factor allows higher levels of light transmission. The anti-fog treatment ensures clean and safe vision. All our visors are 2.2 mm thick.

— Optimum visor closing

Sealed visor which prevents the entry of air and ensures a perfect driving.

— Fast removing visor

With a quick movement, we are able to unlock the visor for easy removing.

— Visor lock system

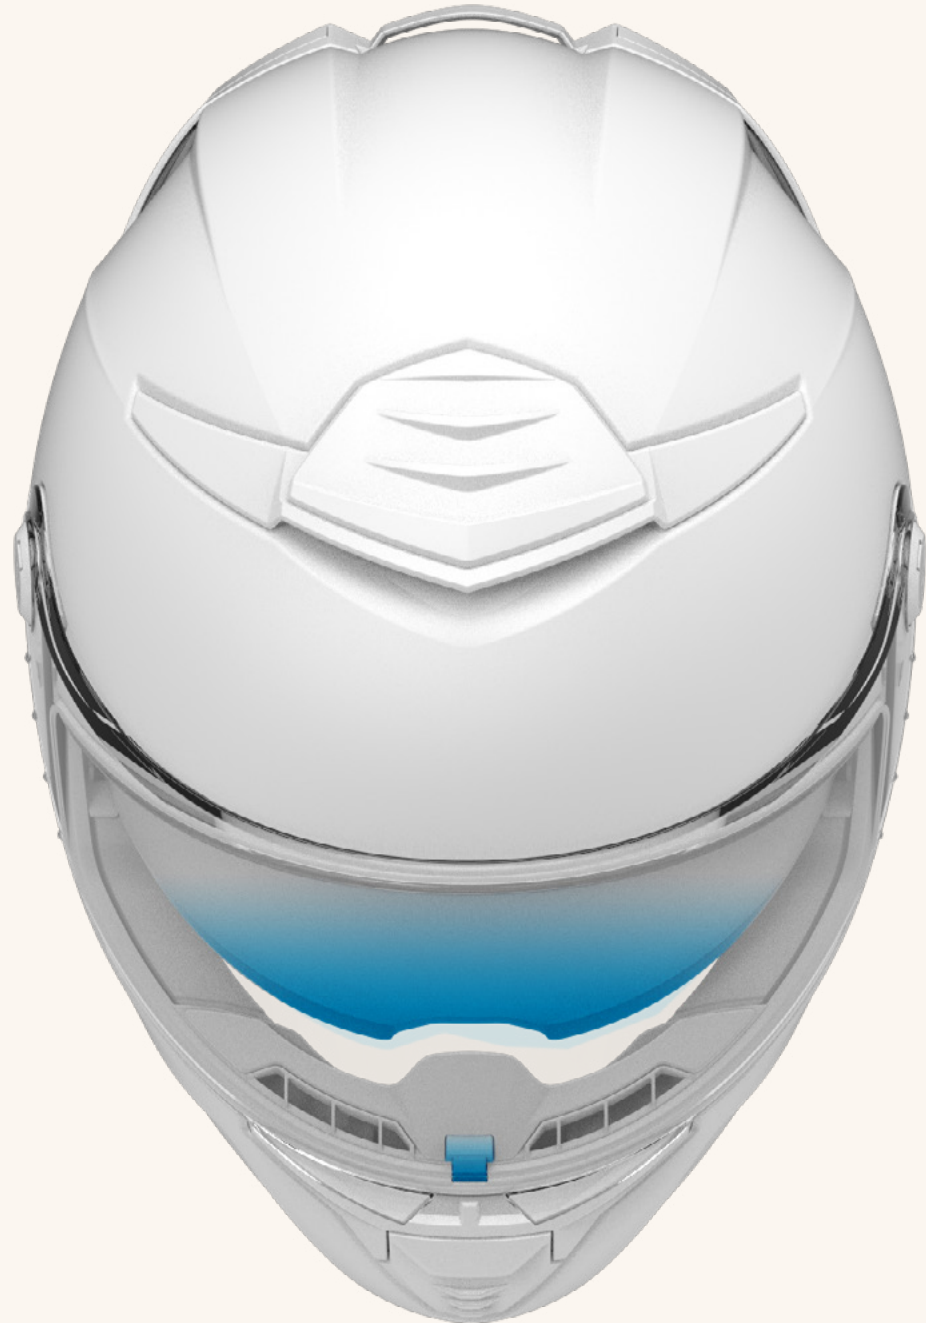

Some visor models have an innovative locking system. Once the visor is closed, the lock ensures an optimal seal against wind and water at every closure. Pressing the lock button will release the visor to its first opening position automatically.

— Adjustable visor

The pivoting system of the MT Helmets visor guarantees a uniform closure all around the visor. This mechanism allows the visor to be replaced quickly and easily, and the visor can be released with just one hand.

— Inner sun visor

Inner sun visor available on some full face, flip-up and jet helmets.

Colours based on model

All the helmets are sold with a clear visor by default.

Comfort

— Removable and washable pads

All the MT Helmets pads are easily removable to be cleaned with clear water and neutral soap. The pads are hypoallergenic and anti-bacterial.

— Air inputs

To obtain an effective vent, it is imperative air is actually entering in the helmet. MT Helmets uses high tech air permeable linings on its high range helmets.

— Air outputs

To obtain an optimum vent, the most important characteristic to take into consideration is the air extraction on the helmet rear area. The extractor allows the creation of an air flow through the helmet to evacuate the inner heat.

— Quick vents activation

The main advantage of this device is its easy handling with or without gloves. The user doesn't need to look for a small lever on the helmet to operate the air control and therefore can focus his attention on driving, which allows higher security.

— Fire retardant fabric lining

The fabrics use for the lining are made of fire retardant fibers to obtain optimum safety.

Safety

— Inner shell with hi-impact absorption

The helmet surrounds your head with a set of materials designed to absorb and cushion the force of impact from an accident.

— Internal multi-density polystyrene

To optimise a better distribution of energy in case of impact, our helmets use multi-density polystyrene.

— Double “D” ring fastening

Optimal retention system for closed circuit or motocross competitions.

— Micrometric buckle closure system

Retention system designed to create greater riding comfort ideal for road and urban helmets.

— Approvals and certificates

All of our MT Helmets exceed the requirements for international ECE and DOT approvals. Our helmets have been awarded the Sharp recognition and we are also proud to announce the FIM Racing homologation for our KRE+ and KRE racing helmet.

Chart of sizes

Adult sizes

Kid sizes

1

Measure the diameter of your head

Place the tape measure at the level of your ear. Go all the way around your head until the tape measure is about two centimetres above your eyebrows.

2

Find your size

Check the table below to see what size helmet your measurement corresponds to. If your measurements are between two sizes, we recommend choosing the larger size.

MT Foundation

AP77.

The Andreas Perez Foundation was born in 2018 with the aim of helping to develop sports projects related to professional motorcycling competition. As a result of the partnership with the company Spirit Motoracing, projects have been developed in the motorbike world championship and in the junior world championship, both projects in the Moto3 category. The foundation was born with the support of the company that manages the motorbike world championship rights, Dorna, and with its CEO (Carmelo Ezpeleta) during at the presentation ceremony.
